

## **Intercargo is going green!**

We are consciously working on recycling and other „green“ initiatives.

We are actively promoting environmentally friendly transport modes.

We recycle paper from our copiers and printers. Why is this important? Consider this:

- Recycling old paper into new paper uses up to 55% less energy than making new paper from trees.
- Recycling old paper reduces air pollution by 95%.
- Commercial and residential paper waste accounts for more than 40% of waste going to the landfill. Eliminating this paper from our waste would nearly double the lives of current landfills.
- Our technology also plays a role in Intercargos greener environment. For instance more and more customers are joining us via electronic way and are accessing documentation in PDF format from our website.

A greener Intercargo. Doing our bit to help the environment.
